OCM · OPEN COMMERCE NETWORK

A foundation for connected microeconomies

Shopong is the access point. OCM is the open platform people can build on.

THERE ARE TOO MANY APPS.

The idea. Every community and small business has different needs. Instead of forcing everyone into another closed, one-size-fits-all app, OCM provides open, modular infrastructure so people and builders can shape the tools and workflows that work for them.

THE PROJECT SPINE

01 DIGITAL SOVEREIGNTY	People choose how they organize, interact, trade, and coordinate.
02 OPEN, MODULAR INFRASTRUCTURE	Shared capabilities that builders can combine in different ways, without prescribing one workflow.
03 SOCIAL ECONOMIC COORDINATION	Individuals, communities, small businesses, buyers, sellers, suppliers, drivers, and funders connect around real needs.
04 TRUST & ACCOUNTABILITY	Transparent transactions, verifiable identities, clear obligations, and reliable fulfillment support trustworthy relationships.
05 STRONGER MICROECONOMIES	Communities gain purchasing power. Small businesses gain access to stock, capital, markets, and delivery networks.

FOUR CONNECTED CAPABILITIES

IDENTITY	DATA	FINANCE	LOGISTICS
Participants and accountability	Shared information and records	Payments and pooled funds	Movement of goods

FIRST DEMONSTRATION: EVERYDAY COMMERCE

Community stokvel
Members coordinate a bulk grocery purchase, compare supplier options, pool funds for payment, and arrange delivery to a shared collection point.

Small retailer
A shop owner finds suppliers and potential funding, gets stock delivered, sells goods, and tracks the obligations that follow.

THE PRINCIPLE: OCM PROVIDES THE INFRASTRUCTURE. PEOPLE DEFINE THE USE.

Microeconomics is the focus. Digital sovereignty is the foundation. Transparency is how trust is earned. Shopong demonstrates one way to access OCM; it does not define the platform's limits.
